INDUSTRY BULLETIN: 26-18

Expanded API Access

Dear New Mexico Cannabis Licensees and Stakeholders:

The Cannabis Control Division (CCD), in coordination with Real Time Solutions (RTS), continues to expand the third-party integration capabilities available through New Mexico's cannabis track-and-trace system, NMS2S.

As previously communicated, the initial launch of NMS2S prioritized point-of-sale (POS) API functionality necessary to support third-party dispensing and sales integrations. CCD also indicated its intent to make additional API functionality available following launch to support inventory management and other licensee operations.

CCD and RTS are now preparing to make expanded API functionality available to third-party integration partners. Beginning October 1, 2026, integration partners will be able to begin development and testing of nine expanded API endpoints in the NMS2S User Acceptance Testing (UAT) environment.

The expanded API functionality is expected to include the ability for authorized third-party integrations to:

- Retrieve inventory by location;
- Retrieve individual inventory items by NMS2S inventory ID or barcode;
- Retrieve plants by location;
- Retrieve individual plants by NMS2S plant ID or barcode;
- Split inventory items;
- Make authorized inventory adjustments; and
- Update inventory product names.

This expanded functionality is intended to allow third-party providers to develop additional inventory-management and cultivation workflows that interact directly with NMS2S while maintaining NMS2S as the system of record.

Expanded API Production Access

Use of the expanded API functionality in the NMS2S production environment will require a production Integrator Bearer Token.

Existing dispensing/POS API functionality will remain unchanged and will not require the new Integrator Bearer Token when the expanded functionality is initially released.

Third-party integration partners seeking production access to the expanded API will be required to complete CCD's access and validation process before receiving a production Integrator Bearer Token. This process will include identifying the expanded API functionality the integration partner intends to use, agreeing to applicable production-access requirements, completing required UAT testing and validation, and confirming readiness for production use.

Documentation and materials related to the expanded API access and validation process are currently being finalized and will be provided directly to interested third-party integration partners as soon as they are available.

Participation in UAT does not constitute approval, certification, or endorsement of a third-party integration by CCD. UAT access also does not constitute authorization to access the NMS2S production environment.

Third-Party Integration Providers

The following third-party integration providers have been notified of the upcoming expanded NMS2S API access and will be provided with related technical documentation and information regarding the process for obtaining expanded API access:

- Tastio
- SMOKESTACK
- Inscribe
- Flowhub
- Jane Technologies (Jane POS)
- Flourish Software
- Weave IQ
- GrowFlow
- Cova
- BioTrackTHC
- OpenTHC
- Proteus420
- CDM
- Dutchie
- SD Technologies
- Blaze
- Oasis Cannabis Co.

- All Ways Cannabis/Terpy Distribution
- Posabit
- Secure and Complete LLC
- HospitalityAi / Leafnet
- eHopper
- Canneye LLC
- King & Rook LLC
- Areto Cannabis LLC
- Adilas
- Allleaves
- Distru
- Leaflink
- Meadow
- MJ Freeway
- Sweed
- Treez
- ioKush
- IndicaOnline

Inclusion on this list does not indicate that a provider has committed to developing or offering expanded NMS2S integration functionality, nor does it constitute approval, certification, or endorsement of the provider or its software by CCD.

If you are a CCD licensee currently using a third-party integration provider that is not identified above and would like that provider to have the opportunity to develop expanded functionality with NMS2S, please contact your provider

directly and encourage them to reach out to CCD Compliance Manager Nick Mourning via email at nick.mourning@rld.nm.gov.

CCD encourages licensees to communicate directly with their third-party providers regarding the specific NMS2S functionality the provider intends to develop, its participation in UAT, and its anticipated timeline for making expanded integration functionality available to customers.

Information for Licensees

Licensees do not need to obtain an Integrator Bearer Token. Third-party providers are responsible for completing the applicable access, testing, and validation requirements for their integrations.

The NMS2S web application will remain available to licensees regardless of whether a licensee chooses to use a third-party integration. Use of third-party integration is not required to access or use NMS2S.

CCD will continue to provide licensees and stakeholders with information regarding expanded API functionality and third-party integration opportunities as implementation progresses.

Sincerely,

Cannabis Control Division

New Mexico Regulation & Licensing Department

The New Mexico Regulation and Licensing Department regulates more than 400,000 individuals and businesses in 35 industries, professions, and trades across the state.

Its mission is to ensure qualified professionals provide quality care and services to all people of New Mexico.
